Description

19th century equine veterinary instruments.
Comprising: - A donkey step or tongue depressor (This instrument keeps the horse's mouth open during the care provided to it). Height 35cm. - An ortritor plane or inertia tooth breaker (with a sharp blow, a sliding sleeve on the axis of the tool, comes to strike the iron jaw. The shock is instantaneous and breaks the tooth without pain for the animal if the tool is properly handled). length 82.5 cm. - A tooth rasp (Instrument allowing to equalize the tooth which has just been broken). Length 62cm. - And a dental rasp for horses with an adjustable float at a right angle, and a float rasp with an inclined angle. Wooden handle, with threaded end rod having an adjustment screwdriver for the floats. Length 50cm / 36.5cm.
