### Description

Ouraline carafe accompanied by its glass is a fine example of the refinement of uraline glass, a material rich in uranium oxide which gives it its luminous green hue and fluorescent under UV light. Dating from the 19th century, this set is distinguished by its elegant hexagonal shape and its finely enameled gold decoration, embellished with floral and arabesque motifs. The raised texture, typical of uraline pieces, brings a sophisticated touch to the set. Highly prized by collectors, uraline glass embodies both the luxury and artisanal innovation of the time. Carafe 27cm, glass: 10cm
