### Description

Body formed of two interlocking parts by stapling: a frustoconical body riveted to a plinth, and a shoulder with a stepped collar and rolled edge. Each, forged from a single piece, without welding or brazing. Step lid, slightly interlocking, hilly, with spout cover and shell thumb. Side handle, flat with raised and rolled edges. Round axial copper handle, dangling on hook ears. Height at the nipple: 38 cm. Diameter at the shoulder: 24 cm. Small and discreet restorations on the collar and shoulder. Period: 18th century. Very good condition. See additional information on: <http://antiquites-lauginie.fr> Free shipping by COLISSIMO for metropolitan France.
